Process	Description		
PK TIER 1	Example: Single spun plasma at multiple time points (charge per time point)		
PK TIER 2	Example: Cells from CPT tubes fixed in methanol		
PK TIER 3	Example: Stored plasma, DBS, and PBMCs from whole blood.		
TISSUE TIER 1	Example: The addition of simple reagent such as PBS or "aliquotting" tissues into multiple vials		
TISSUE TIER 2	Example: Tissue fixed in formalin followed by transfer to ethanol		
TISSUE TIER 3	Example: Mulitple tissues and multiple processes (price may vary)		
SAMPLE TIER 1	Example: Whole Saliva, urine, CVL - aliquot and label only		
SAMPLE TIER 2	Example: CVL processed into fluid + single dry (or wet) cell pellet		
SAMPLE TIER 3	Example: CVL processed into fluid + cryopreserved cells (CLN)
