

David M. Rothenberg, MD, FCCM

The Max S. Sadove, MD, Professor
of Anesthesiology

Advancement of Medicine

I was fortunate to have published a chapter regarding the perioperative management of renal function during open-heart surgery in a major textbook of cardiac anesthesiology. By doing so, the names of Rush University and **Max S. Sadove, MD**, continue to be represented in medical literature.

I also continue to provide what I hope is excellent clinical care to patients who require consultation prior to their surgeries. As the primary physician in the Anesthesia Preoperative Evaluation Clinic, or APEC, I maintain a prominent clinical role for our high-risk surgical patients. I also teach our anesthesiology residents. We also remain at the forefront of telemedicine services, enabling us to consider patients who would otherwise have to travel long distances to our Rush facility.

Research and Education

The funds from the Sadove chair allow for all faculty, particularly the junior faculty I mentor, to participate in clinical research projects and educational endeavors, such as speaking engagements for grand rounds at other anesthesiology departments.

The Year Ahead: 2026 and Beyond

In 2026, I plan to focus on my practice in APEC. I also hope to serve as a visiting professor at other institutions on behalf of our department.

With Gratitude

I once again offer my heartfelt gratitude to the Sadove family for supporting the Max S. Sadove, MD, Professorship of Anesthesiology. I will continue to honor Dr. Sadove's memory by pursuing academic excellence on behalf of the Department of Anesthesiology and Rush University Medical Center.
