

## Vijaya B. Reddy, MD, MBA

The Harriet Blair Borland Chair of Pathology

### Advancement of Medicine

During the 2025 calendar year, I was able to support the work of pathology trainees in conducting patient-centered clinical research, which resulted in almost 15 local and national presentations. The endowment also allowed me to fund travel and other educational expenses for residents to share their research findings with experts in the field at a national conference. A medical student from Rush Medical College participated in a research project that culminated in a presentation at a national conference in pathology.

### Research and Education Highlights

- I was an invited speaker at the United States and Canadian Academy of Pathology.
- I have recently signed a contract for the 5<sup>th</sup> edition of our book “Differential Diagnosis in Surgical Pathology” to be published by Elsevier Inc.

### The Year Ahead: 2026 and Beyond

I am focused on developing the next generation of pathologists who will serve the community. To this end, I am developing more educational programs and modestly funded research opportunities for them. I would like to help them translate their research into full-length publications.

### With Gratitude

I am grateful to the Borland family for giving me the ability to support the intradepartmental research that is ongoing. Your support has allowed me to invest in the future of pathology and the next generation of pathologists. Thank you for your generosity in establishing the endowment.
